

# Customize your User Buttons

Type your button labels in the text fields below, press print and cut them out. Using clear printable acetate sheets is recommended as the user buttons are back-lit when activated. Summa user buttons have removable tops under which you can insert your customized labels. If you have trouble removing the button caps, try using a blu-tak-type product to grip them.

When printing, ensure 'actual size' rather than 'fit to printable area' is selected within your printer's settings to ensure the labels are created at the correct dimensions. Sizing options vary between printer manufacturers.
